### **DETAILED ACTION**

## Response to Arguments

1. Applicant's arguments with respect to claims 1-18 have been considered but are most in view of the new ground(s) of rejection.

## Claim Rejections - 35 USC § 103

- 2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
  - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 3. Claims 1-18 are rejected under 35 U.S.C. 103(a) as being unpatentable over Pimentel in view of Arques (US Pub No: 2004/0131083).

As to claim 1, Pimentel discloses a method of transmitting a messaging service message from a sender in a first system having a first structure for messages to a receiver of a second system "multiple integrated networks, page 3, par. [0029]" having a second structure for the messages (page 2, par. [0014-0018]), the method comprising utilizing a particular protocol, i.e "means for choosing a protocol using a characteristic of the mobile terminated message..." in the transmission of the message (page 2, par. [0017-0019], page 3, par. [0033]). However, Pimentel does not disclose to utilize a bearer independent protocol proving access to bearers.

Art Unit: 2617

In the same field of endeavor, Arques discloses to utilize bearer independent protocol proving access to bearers (page 1, par. [0008]). Therefore, it would have been obvious to one of ordinary skill in the art at the time the invention was made to provide of utilizing a bearer independent protocol proving access to bearers as taught by Arques to the system of Pimentel in order to allow reliable telecommunication system.

As to claim 2, Pimentel further discloses a method according to claim 1, further comprising: supporting the bearer independent protocol in a receiver's equipment; receiving the message having the first structure in a server comprising an application according to the bearer independent protocol (page 3, par. [0031-0033]); converting the message to have a structure of the bearer independent protocol (page 3, par. [0033]), and transmitting the converted message from the server to the receiver's equipment using the bearer independent protocol (page 4, par. [0036]).

As to claim 3, Pimentel further discloses a method according to claim 1, further comprising: supporting the bearer independent protocol in a sender's equipment (page 3, par. [0033]]); and transmitting the message from the sender's equipment to the receiver's equipment using the bearer independent protocol (page 3, par. [0034-0035]).

Art Unit: 2617

As to claim 4, 16, Pimentel further discloses further comprising: if the message transmission to the receiver's equipment fails (page 3, par. [0033-0035]); converting the message to have the second structure (page 3, par. [0033-0035]; and transmitting the message to the receiver's equipment in the second structure (page 3, par. [0033-0035]).

As to claim 5, Pimentel further discloses a method according to claim 1, further comprising: supporting the bearer independent protocol in the sender's equipment (page 3, par. [0029]); sending the message from the sender's equipment according to the bearer independent protocol (page 3, par. [0034]); receiving the message in a server comprising an application according to the bearer independent protocol (page 4, par. [0037-0039]); converting the received message from the bearer independent protocol structure to the second structure (page 3, par. [0032-0033]); and transmitting the converted message from the server to the receiver's equipment (page 3, par. 0034-0035], page 4, par. [0036]).

As to claim 6, Pimentel further discloses a method according to claim 1 further comprising: receiving the message having the bearer independent protocol structure in a server comprising an application according to the bearer independent protocol (page 3, par. [0030], [0034]); converting the message to have the second structure (page 3, par. [0031-0033]); and transmitting the converted message from

Art Unit: 2617

the server to the receiver's equipment (page 3, par. 0034-0035], page 4, par. [0036]).

As to claim 7, 17, Pimentel further discloses all the limitations of claim in page 3, par. 0034], page 4, par. [0036].

As to claim 8, 18, Pimentel further discloses all the limitations of claim in page 4, par. [0041] "employ an IP interface to provision for UDP/IP services".

As to claim 9, 13, Pimentel discloses a telecommunication system comprising at least a first system having a first structure for messaging service messages (page 1, par. [0003-0010]); a second system having a second structure for the messages (page 1, par. [0010], page 2, par. [0014-0018]); and a server via which a message is transmitted from the first system to the second system "multiple integrated networks, page 3, par. [0029]" (page 3, par. [0030-0034]); the server being configured to utilize a bearer independent protocol for transmitting the message (page 3 through page 4, par. [0034-0039]). However, Pimentel does not disclose to utilize a bearer independent protocol proving access to bearers.

In the same field of endeavor, Arques discloses to utilize bearer independent protocol proving access to bearers (page 1, par. [0008]). Therefore, it would have been obvious to one of ordinary skill in the art at the time the invention was made to provide of utilizing a bearer independent protocol proving access to bearers as

Art Unit: 2617

taught by Arques to the system of Pimentel in order to allow reliable telecommunication system.

As to claim 10, Pimentel further discloses a telecommunication system according to claim 9, wherein the first system comprises a network node having functionality related to messaging services within the first system (page 3, par. [0030]), the network node being configured to recognise the message sent to the second system and forward the message to the server (page 3, par. [0031-0035]).

As to claim 11, Pimentel further discloses all the limitation of claim in page 4, par. [0036-0039].

As to claim 12, Pimentel further discloses a telecommunication system according to claim 9 wherein the system comprises another server configured to utilize a bearer independent protocol for transmitting the message (page 3, par. [0033]), one of the servers being a first server (via which the message is transmitted from a sender in the first system to the second system and the other one being a second server via which the message is transmitted from the first system towards a receiver in the second system ("SMS-C1, SMS-C2, SMS-CN; and APPLICATION1, APPLICATION2 of BACKEND SYSTEM 84", Fig. 5), the first server is configured, in response to receiving the message having the first

Art Unit: 2617

structure, to convert the message to have a structure according to the bearer independent protocol, and send the converted message to the second server, and the second server is configured, in response to receiving the message having a structure according to the bearer independent protocol, to convert the message to have the second structure before forwarding the message to the receiver (See the process of steps the short messages "SM" page 3, par. [0029-0035], page 4, par. [0036-0040]).

As to claim 14, Pimentel further discloses a server according to claim 13, wherein the server is configured (page 4, par. [0039]), in response to receiving the message having the first structure (page 3, par. [0035]), to convert the message to have a structure according to the bearer independent protocol before forwarding the message (page 4, par. [0036]).

As to claim 15, Pimentel further discloses a server according to claim 14, wherein the server is configured (page 3, par. [0030-0033]), in response to receiving a message having a structure according to the bearer independent protocol (page 3, par. [0034]), to convert the message to have the second structure before forwarding the message (page 4, par. [0036]).

### Conclusion

Art Unit: 2617

4. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to PHUOC H. DOAN whose telephone number is 571-272-7920. The examiner can normally be reached on 9:30 AM - 6:30 PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, GEORGE ENG can be reached on 571-272-7495. The fax

Art Unit: 2617

phone number for the organization where this application or proceeding is assigned

is 571-273-8300.

Information regarding the status of an application may be obtained from the

Patent Application Information Retrieval (PAIR) system. Status information for

published applications may be obtained from either Private PAIR or Public PAIR.

Status information for unpublished applications is available through Private PAIR

only. For more information about the PAIR system, see http://pair-

direct.uspto.gov. Should you have questions on access to the Private PAIR system,

contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you

would like assistance from a USPTO Customer Service Representative or access to

the automated information system, call 800-786-9199 (IN USA OR CANADA) or

571-272-1000.
